Dear Hiring Manager,

As a passionate Full-Stack Developer with over four years of professional experience and a solid foundation in React, Next.js, NestJS, and scalable backend architectures, I am excited to apply for a role within your engineering team. My career has been driven by a deep curiosity for clean code, intuitive design, and impactful products, principles I believe align strongly with your company's mission.

During my recent role as a Senior Front-End Developer at Proxym Group, I led the development of large-scale React and Angular applications serving thousands of users. I implemented modular Nx architectures and GraphQL APIs that streamlined system load by 20% and boosted Lighthouse scores by 37%. These improvements weren't just technical wins, they translated to better user experiences and real business value. I also introduced team-wide React training sessions and standardized code quality through ESLint and Prettier, leading to a 25% improvement in maintainability.

My experience also includes full-stack responsibilities: from optimizing complex MongoDB queries and deploying CI/CD pipelines to building backend frameworks on top of Express.js and NestJS. I am particularly comfortable working in TypeScript ecosystems, and I am committed to TDD practices, documentation, and continuous learning.

Relocating to Germany has strengthened my determination to contribute to mission-driven teams in dynamic environments. I currently reside in Berlin with a job seeker visa and I'm motivated to join a company where collaboration, creativity, and impact are central values.

I look forward to the opportunity to contribute to your team's success and would be happy to discuss how my skills can add value to your current and future projects.

Thank you for your time and consideration.

Warm regards,

Fakhreddine Messaoudi
